Computer Forensic Services

Computer Forensic Expert Services

COMPUTER FORENSIC PRESERVATION & ANALYSIS

Preservation of evidence begins with knowing where to look. The forensic experts at Elijah possess the detailed understanding of enterprise computing systems, cloud-based storage, mobile platforms, operating systems and social media necessary to ensure that all potential data storage locations are considered.

Not all matters, however, require preserving every conceivable location in which potentially data could reside. The Elijah team has the wisdom necessary to recommend proportional, defensible data preservation strategies that minimize both legal risks and costs, and a track record of testifying persuasively in support of such approaches.

When it comes to implementing their recommendations, Elijah's forensic examiners utilize efficient, non-intrusive methods to collect data in a verifiable, forensically sound manner. Elijah can save you money by performing remote forensic collection of devices, often eliminating the need to incur expensive travel costs or involve multiple vendors. Desktops or laptops, local servers or hosted, smart phones or flash drives, social media or web mail, Mac or Windows—no matter the scenario, you can count on the forensic experts at Elijah to devise and implement the optimal approach to identify and preserve potential electronic evidence.

DESIGNING PROJECT SCOPE

Elijah utilizes a consultative approach, closely working with your team to develop a proportional plan to identify and preserve potentially responsive electronically stored information (ESI). Our forensic experts have the experience and communication skills to interface with IT, legal and management personnel in order to understand your systems and needs, and collaborate with you to develop a cost-efficient, defensible forensic preservation strategy.

PRESERVING KEY DATA

Our forensic experts promptly isolate and preserve potentially relevant data and employ reasonable, defensible, auditable and proportional preservation techniques and protocols to mitigate risks, maintain data integrity and minimize business disruption. Elijah's advanced forensic technologies allow us to preserve the widest variety of ESI, including mobile, cloud-based and social network data that many other examiners cannot accommodate.

Delivering a unique combination of **judgment, responsiveness** and **value** to many of the world's largest companies and law firms.

ELIJAH

FORENSIC ANALYSIS

Utilizing a multi-disciplinary team of computer forensic experts, Elijah is uniquely positioned to provide a comprehensive approach to investigations. Beyond merely recovering deleted data and other artifacts of computer usage, our forensic examiners have legal, accounting, law enforcement and computer science backgrounds that we bring to bear in solving the most complex investigative issues. Combining critical thinking skills, diverse perspectives and in-depth technical knowledge, Elijah sees the full picture where others see only pieces of the puzzle, and communicates its findings in a manner readily understandable by finders of fact. Elijah also has experience serving as a special master and forensic neutral, offering a balanced and efficient approach to resolve disputes involving electronic evidence.

EXPERT TESTIMONY

Elijah has substantial experience providing clear, effective testimony regarding electronic evidence. Truthful, factual and conservative opinions are our hallmark. Adhering to this core philosophy throughout all facets of our work sets the stage for surprise-free testimony at trial. Our experts have testified in oral and written form before federal and state courts, arbitration panels such as FINRA and AAA, and various administrative bodies. Every tribunal that has considered the issue has found Elijah's testifiers to be qualified computer forensic experts.
